ENERGY EFFICIENT SYSTEMS

plan for warmth

A HEATING PLAN DESIGNED FOR YOU

LIVING FLAME FIRES

COMPETITIVE QUOTATIONS

PLAN FOR WARMTH IS A FREE ADVISORY SERVICE DESIGNED TO HELP YOU THE HOME OWNER OBTAIN A QUALITY HEATING SYSTEM - AT A SENSIBLE PRICE. IT IS OF PARTICULAR BENEFIT TO THOSE WHO ARE UNSURE OF WHICH SYSTEM OR FUEL IS BEST FOR THEIR PROPERTY OR WHO MAY BE UNCERTAIN ABOUT CHOOSING A REPUTABLE INSTALLER TO DO THE WORK.

three easy steps

STEP 1

Call into one of our Heat Centres and a qualified Designer will show you the latest in heating equipment and discuss the many options available. With his help - made easier if you have a House Plan available - you can take these first steps towards planning a heating system to suit YOUR home and lifestyle. If a plan is not available we will arrange for a free site visit by our Survey Engineer, providing the location is within approximately 50 miles of our Heat Centre.

STEP 2

From our knowledge of your requirements and from the House Plan, our Design Engineer will prepare an energy efficient system 'tailor made' to your specific needs. Safety approved products will be specified and the performance of our system will be guaranteed.

STEP 3

Based on this design, we invite on your behalf, two or three competitive quotations from reputable local Plumbers, each of whom will quote a price for the complete job. The final choice of Plumber will rest with you although if you require any guidance in this decision we will be pleased to help.

OUR HEAT CENTRES

A browse through one of our Cosy Heat Centres will prove rewarding, especially if you are installing new Heating or even upgrading an old system. Our illustrations show only a fraction of the products on display - some of them, like the Rayburn Cooker and Living Flame Gas Fires, are in actual operation. Many other products such as Fireplaces, Accessories, and Multi-fuel Stoves can also be seen with, of course, our friendly Technical Staff on hand to answer your questions.

On Display At Our Heat Centres

- The latest technology in Heating Systems; all fuels
- The latest in Hot Water Systems
- Fireplaces
- Rayburn and Stanley Cookers
- Living Flame Gas Fires
- Multi-fuel Stoves

your benefits

Whether the heating system you require is for your home, business premises or elsewhere, our Plan For Warmth advisory service guides and provides you with a balanced view of the benefits which different systems can provide.

Because we employ qualified Designers we can confidently guarantee a comfortable temperature, even in severe weather conditions, and you can be sure that the actual system will conform to recognised safety standards and fuel efficiency. All our systems are designed on C.A.D. (Computer Aided Design) and are to British Standard BS5449 (1990).

A major benefit of Plan For Warmth is that whilst you receive competitive quotations from different installers, all are basing their price on our guaranteed design; this means that choosing the best offer is very straightforward – certainly not the case for those people who go direct to different Companies and end up with a muddle of conflicting ideas and prices.

And finally, in dealing with Northern Heating you will have the benefit of our years of experience in heating the coldest parts of Scotland where our reputation for quality and after sales service is second to none.

The classic range style cooker - by Rayburn.

X-Stream sculpture radiator - by Bisque.

Central Heating is a major Home Improvement and arguably the most important because it involves the health, comfort and well-being of your family for many years to come. Beware of cheap offers because in Central Heating, the proverb 'buy cheap - buy dear' is most apt; a bad decision with your Package Holiday soon fades to an unpleasant memory - make a similarly bad decision when buying Central Heating and you have to live with the mistake for a very long time.

do it once - do it right

Purmo Underfloor Heating is increasingly popular with homeowners and specifiers - freeing up valuable wall space and allowing complete freedom for interior design.

The system of cross-linked polyethylene pipes below or within the floor, through which warm water is circulated to heat the floor mass and space above, is effective under all floor coverings. The combined effect of using the floor mass as an energy store, the low demand on the boiler and the distribution of heat only to occupied areas, makes underfloor heating more economical to run than other wet systems.

Our systems, whilst competitively priced, give guaranteed comfort and all round value for money. To ensure this we use equipment of the highest quality and safety standards, which is built into an 'energy efficient' Installation to last you many years.

REMEMBER, THE REAL COST OF A HEATING SYSTEM IS THE ANNUAL FUEL COST - NOT ITS INSTALLATION COST!

The Dream Fireslide living flame gas fire by Valor.

which fuel? unbiased advice

Each fuel has its own merits or drawbacks and if, like many people, you are uncertain what is best suited to your needs, through Plan For Warmth we are able to give you unbiased advice on this issue. Because we supply heating systems which operate on all the major fuels we have no commercial interest in promoting any one fuel over another.

Our recommendation is based on one factor only -

What is best for *YOUR* home and lifestyle.

adapted to your needs

Improving old systems

Northern Heating is nowadays becoming increasingly involved in improving old systems; this may mean changing to a modern condensing boiler and more effective radiators, perhaps also by fitting money saving temperature controls - of vital importance in offsetting rising fuel costs.

Heating the larger property

Our Design Engineers are just as capable of designing larger systems as they are the small bungalow. Since Northern Heating was formed in the late 70's, countless Hotels, large Country Houses, Nursing Homes etc enjoy the comfort and cost benefits of a Northern Heating quality system.

A unique service - with no fee appeal!

Plan For Warmth has been established to give you the Home Owner impartial advice when choosing Central Heating. We merely rely on the sale of heating equipment to your chosen Plumber if you decide to go ahead with the project.

In recent times, Hot Water Underfloor Heating fuelled by gas or oil is gaining in popularity. Our Technical Staff are fully conversant with this concept in heating and we can design and supply a system to suit your property.
